The Review of Evolutionary Political Economy—REPE

The Review of Evolutionary Political Economy—REPE is an international, pluralistic and real-world oriented high-quality and double-blind peer-reviewed scholarly journal, sponsored by the European Association for Evolutionary Political Economy—EAEPE.

It is committed to the advancement of cutting-edge evolutionary political economy. REPE therefore invites high-quality research or review papers, as well as notes, in the broad areas of evolutionary economics and political economy. The papers may cover history of thought but shall include cutting-edge findings in theory, methodology, empirical applications, data analysis, and policy implications. One of its focuses will be on computational approaches.

Theoretical and methodological evolutionary or institutional studies should address their potential political-economic implications, and political economy papers should consider their theoretical and methodological dimensions. Papers will, for instance, consider the heterogeneity of economic agents and their institutional, political, or environmental embeddedness as starting points to analyze the complexity of economic interaction systems and the dynamics of economic development. They may address the roles of change and innovation, institutions, and also power relations, the causes and consequences of economic and financial crises, the determinants and the economic impact of inequality, or the economic and social causes and consequences of environmental degradation and climate change.

The papers may also include interdisciplinary approaches to the analysis of complex systems, stemming from collaboration with social, natural, and computer sciences, as well as from behavioural sciences and humanities. Finally, the journal also welcomes papers in New Political Economy (NPE) fostering a real-world political economy, and in International Political Economy (IPE).

REPE regularly publishes thematically cross-cutting and integrative special issues that encourage advancement, comparison, and synthesis of different approaches and their application to topical real-world issues and invites potential guest-editors to submit ideas and proposals.
